Name of System - when none are selected, it would be great if it could say something like, "Select a classification system from the menu below"

Drop-down menus

County Classification Systems | Census Tract Classification Systems | ZIP Code Classification

Or maybe one drop-down menu with sub menus?

Map - when none are selected, could map just be a plain map of Wisconsin?; also, are tool tips an option? Could there be a tool tip with the name of the geo unit and it's classification code?

Classes table - blank when none are selected; would it be possible to use the table as the key?

Visualizations of some sort that show % pop, % land, and % units by category (metro, micro, rural)

Link to page that provides description of system, link to data source, and demographic and population health data

Button to return to main page

Name of system

Description of system and website to data source

Data table(s), similar to report - there will be more tables for county-based system since there is more data available for counties
